EXPERIENCE

DeFi Researcher & Tool Builder

May 2026 – Present

Independent

Remote

- Published a **quantitative, data-driven risk analysis** of Ethena's USDe delta-neutral stablecoin on Mirror/Paragraph — modeled break scenarios (procyclical funding rate depletion, counterparty failures) using historical exchange data.
- Built and deployed **AI-powered dashboards** to automate VC due diligence, sourcing, and on-chain analysis — live platform aggregates protocol metrics, generates investment memos, and tracks deal pipelines.

Developer Content Creator

Sep 2025 – May 2026

Remote

- Grew a **34.6K-follower developer community** on Instagram covering AI tools, Claude, ChatGPT, and dev productivity tricks — posts reaching **1M+**, **420K**, and **343K** organic views, proving ability to build and engage technical audiences at scale.

PROJECTS

Dealflow Intelligence Dashboard | *Next.js, Gemini API, DefiLlama, TypeScript* | Live · GitHub

May 2026

- Engineered a production-grade **AI-powered protocol analysis platform** for VC research and due diligence — a 14-page internal tooling suite automating sourcing, on-chain metrics aggregation, and investment memo generation, directly mirroring the workflows at top-tier crypto-native VC firms.
- Architected and shipped a **protocol analyzer** that dynamically aggregates live TVL, market cap, FDV, liquidity depth, and 24h volume via DefiLlama and CoinGecko APIs — enabling one-click fundamental snapshots of any DeFi protocol for rapid initial screening.
- Integrated **Google Gemini Flash 2.0** to auto-generate investment committee memos from raw protocol data — producing structured thesis documents with risk analysis, comparable comps, and valuation frameworks in under 10 seconds, reducing manual research time by 70%.
- Built an **interactive Kanban pipeline board** with drag-and-drop deal tracking across stages (Sourced → Screened → DD → IC → Closed) — providing real-time portfolio visibility and streamlining deal flow management for investment teams.
- Developed a **multi-protocol radar chart comparison engine** visualizing 6-dimensional protocol health (TVL growth, liquidity, volume trends, token distribution, community size, dev activity) — allowing instant side-by-side competitive analysis of similar protocols.
- Deployed a **smart alerts system** monitoring protocol metrics and triggering notifications on significant events (TVL drops >20%, unusual volume spikes, governance proposals) — automating continuous portfolio monitoring and risk detection.
- Deployed live at dealflow-intelligence-one.vercel.app with full TypeScript type safety, Tailwind UI components, and Recharts data visualization — production-ready codebase with modular architecture for rapid feature iteration.

Foundry DeFi Stablecoin (DSC) | *Solidity, Foundry, Chainlink Price Feeds, OpenZeppelin, ERC-20* | GitHub

Mar 2026

- Engineered an **over-collateralized, USD-pegged algorithmic stablecoin** (DSC) inspired by MakerDAO DAI — designed so the total collateral value always exceeds total DSC supply, enforced on-chain at every state change.
- Architected a two-contract system: **DecentralizedStableCoin.sol** (ERC-20 with owner-only **mint/burn**) owned exclusively by **DSCEngine.sol** — the core risk engine handling deposit, mint, redeem, burn, and **liquidation** with a 10% collateral bonus to incentivize liquidators.
- Enforced a **200% collateralization ratio** via on-chain health factor calculations — any position falling below **MIN_HEALTH_FACTOR** is immediately liquidatable, guaranteeing the protocol can never become under-collateralized.
- Integrated **Chainlink Price Feeds** (WETH/USD, WBTC/USD) via a custom **OracleLib.sol** library that wraps every oracle call and **halts the entire protocol** if prices go stale beyond a 3-hour timeout — eliminating stale-price exploit vectors.
- Secured all state-changing functions with **OpenZeppelin's ReentrancyGuard** and the **CEI (Checks-Effects-Interactions)** pattern — preventing reentrancy, flash-loan drains, and double-spend attacks across all collateral operations.

TECHNICAL SKILLS

Blockchain & DeFi: Solidity · Foundry · Hardhat · Ethers.js · Dune Analytics · Etherscan

Languages & Frameworks: TypeScript · JavaScript · Next.js · React · Node.js · Python · Java · C

APIs & Integrations: Gemini API (Generative AI Workflows) · DefiLlama API · CoinGecko API

Specializations: Protocol due diligence · On-chain transaction analysis · AI workflow automation

Web3 Core: Ethereum · EVM · Web3.js · DApp Development · ERC-20/721/4337 · Token Standards · Consensus Mechanisms

Tools: Chainlink VRF · Chainlink CCIP · Chainlink Automation · Git / GitHub · Node.js

Cryptography & Security: ZKPs · SHA-256 · secp256k1 · Keccak256 · Modular Arithmetic · Network Security · IDS

EDUCATION

GITAM Deemed University

B.Tech., Computer Science Engineering — Bengaluru, IN

Graduating April 2026

CGPA: 8.08 / 10.0
